## HB HYDRAULIC BOOSTER

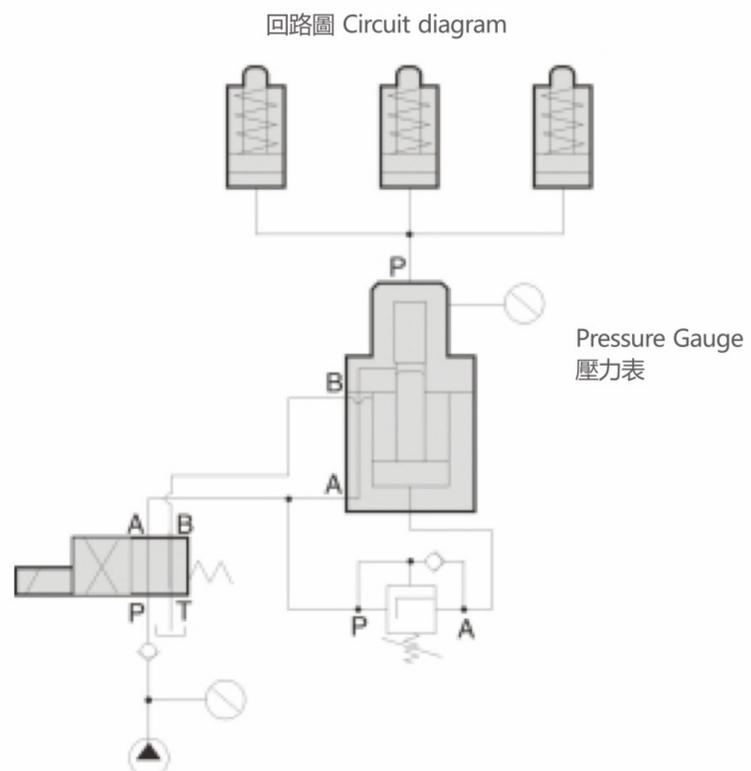

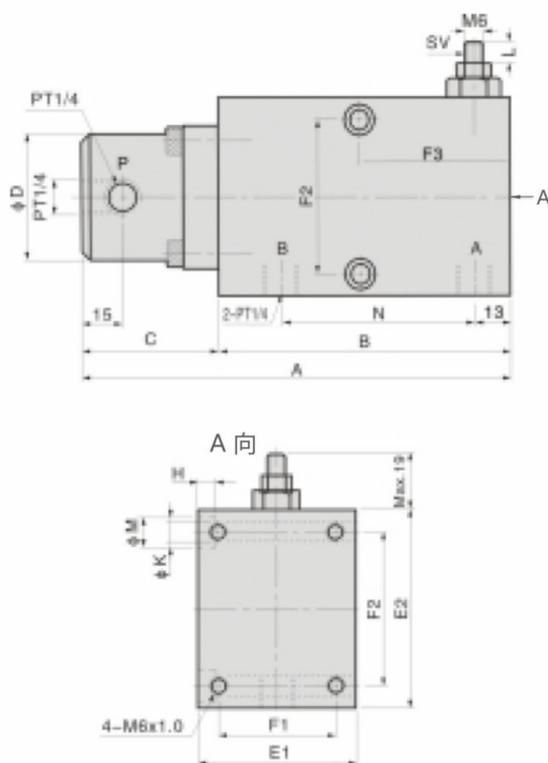

### FEATURES

A hydraulic sequential valve is attached to this booster. When operating, it oils cylinder and makes it be at the dual pressure and let the sequential valve act, and then it will have multiple boosting pressure. It's fit for hydraulic special purpose machine and MC clamp in low pressure circuit. It needs a solenoid valve installed in the circuit, and then it will be able to operate HB super-charger. The super-charger may be converted automatically low oil- pressure into high oil-pressure and obtain a high pressure clamping.

Max. operating pressure: 50 kgf/cm<sup>2</sup>

Min. operating pressure: 20 kgf/cm<sup>2</sup>
